Palliative Care Module

- **Date :** 18th, 19th & 20th November 2024
- **Venue:** MKSSS BTINE, Karvenagar, Pune.
- **Group:** Semester IV B.Sc. Nursing

Day 1 – 18th November 2024

A “**Palliative Care Module**” refers to or is designed to help students to develop in-depth knowledge, competencies, and a positive approach to providing quality palliative care to persons suffering from chronic illnesses and resultant health problems in a variety of settings, collaborating supportive services. The Indian Nursing Council (INC) update regarding integrating Palliative Care into the UG nursing curriculum from the 2022 batch. According to the latest syllabus, a 20-hours mandatory module on Palliative Care is included in the 4th semester (second year) of the fouryear BSc Nursing Course. INC implies that the module is designed to help students develop indepth knowledge, competencies, and a positive approach to providing quality palliative care to persons suffering from chronic illnesses and resultant health problems in various settings, collaborating with supportive services.

9.00 AM- 11.00 AM : Introduction of Palliative Care

During this session, Ms. Vrushali Kalkutagi led an in-depth introduction to the “**Palliative Care Module**”. Palliative care(PC) is an effective model for relieving pain and other symptoms and ensuring the quality of care. Through the units of this module, we shall look at the approach and gain knowledge, skills, a favorable attitude towards providing compassionate and quality palliative care. Because Nurses are often considered the heart of healthcare because they play a vital role in providing compassionate and competent care to patients.

11.00 AM- 1.00 PM : Nursing management of symptoms holistic approach and pain management palliative Care:

Patient descriptions of physical symptoms and their severity are the primary data for symptom assessment in palliative care. Exploring patients' reports of symptoms requires thoroughness, persistence, and patience, a fundamental aspect of palliative care. Symptom assessment usually involves taking a detailed history from the patient to understand the cause and severity of the symptom.

Holistic care focuses on the whole person, not just the condition. It looks at how the individual is dealing with the situation, their physical, psychological, social and spiritual domains of health and any issues they are experiencing. The assessment of symptoms is a vital aspect of nursing care to provide comfort and enhance the quality of life.

Severe chronic pain, including cancer pain, can be managed well through a systematic approach. For example, adequate pain relief can be achieved in 70 to 90 percent of patients if proper treatment guidelines for cancer pain are followed. WHO analgesic ladder is a simple protocol for treating chronic pain. The WHO Pain Ladder is a set of guidelines for the management of pain, developed by the World Health Organization (WHO) in 1986. It is a widely accepted approach for the treatment of pain in patients, particularly those with cancer.
